Agentic AI: A 6-Week Course for High Schoolers

Designed by an AI Platform Architect · No coding or AI expertise required

01

What Is an AI Agent?

The Think→Act→Observe loop. Real-world agentic AI examples. The Agent Hunt activity.

02

The Brain Behind It

How LLMs work. Hallucination explained. Prompt engineering challenge.

03

Tools & Memory

Tool calling, RAG, and persistent memory. Build a Memory Bot.

04

Multi-Agent Systems

Orchestrators, workers, handoffs, and human-in-the-loop. Design Your Agent Team.

05

Build Your First Agent

Hands-on: build, test, and demo a working AI agent using free no-code tools.

06

AI Safety & The Future

Risks, ethics, responsible AI, and careers. The hospital debate.

56%

wage premium for AI-skilled workers (PwC 2025)

80%

of students say teachers never taught them how AI works (RAND 2025)

143%

year-over-year demand growth for AI engineers (DemandSage 2025)

✓ Lesson plans (all 6 weeks)

✓ Student activity worksheets

✓ Assessment rubrics

✓ Editable slide decks

✓ No-code tools guide

✓ Standards alignment (CSTA · AI4K12 · ISTE)
